Practical Explanation: Perform QA and Application Deployment

A simple login application was developed using HTML and JavaScript in VS Code. Quality Assurance was performed by testing the application's functionality such as form validation and button actions.

Different test cases were applied, including empty input fields and valid user input. A bug was intentionally created by using an incorrect element ID in the JavaScript file. The error was identified using the browser console and then fixed by correcting the code.

After successful testing and bug fixing, the application was deployed locally by running the index.html file in the browser.

Post-deployment testing confirmed that the application was working correctly without errors.

Index.html File

```
<> index.html > ...
1  <!DOCTYPE html>
2  <html>
3  <head>
4  |   <title>QA Practical</title>
5  </head>
6  <body>
7
8  <h2>Login Form</h2>
9
10 <input type="text" id="email" placeholder="Enter Email"><br><br>
11 <input type="password" id="password" placeholder="Enter Password"><br><br>
12
13 <button onclick="login()">Login</button>
14
15 <p id="msg"></p>
16
17 <script src="script.js"></script>
18 </body>
19 </html>
20 |
```

Script.js

```
function login() {  
  let email = document.getElementById("email").value;  
  let password = document.getElementById("password").value;  
  
  if (email === "" || password === "") {  
    document.getElementById("msg").innerText = "Fields cannot be empty";  
  } else {  
    document.getElementById("msg").innerText = "Login Successful";  
  }  
}
```

Test Case 1:

Login Form

Fields cannot be empty

Test Case 2:

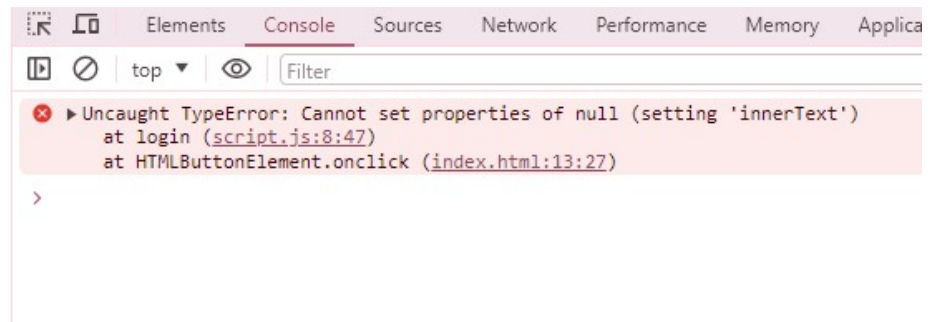

Login Form

Login Successful

Test Case 3:

Error

Login Form

Test case 4:

Debug

Login Form

Login Successful
