DATE:

Install Google App Engine. Create *hello world* app and other simple web applications using python/java.

Aim:

To Install Google App Engine. Create *hello world* app and other simple web applications using python/java.

Procedure:

1. Install Google Plugin for Eclipse

Read this guide – [how to install Google Plugin for Eclipse](#). If you install the Google App Engine Java SDK together with “**Google Plugin for Eclipse**“, then go to step 2, Otherwise, get the [Google App Engine Java SDK](#) and extract it.

2. Create New Web Application Project

In Eclipse toolbar, click on the Google icon, and select “**New Web Application Project...**”

Figure – New Web Application Project

*Figure – Deselect the “**Google Web ToolKit**“, and link your GAE Java SDK via the “**configure SDK**” link.*

Click finished, Google Plugin for Eclipse will generate a sample project automatically.

3. Hello World

Review the generated project directory.

Nothing special, a standard Java web project structure.

HelloWorld/

src/

...Java source code...

META-INF/

...other configuration...

war/

...JSPs, images, data files...

WEB-INF/

...app configuration...

lib/

...JARs for libraries...

classes/

...compiled classes...

Copy

The extra is this file “appengine-web.xml“, Google App Engine need this to run and deploy the application.

File : appengine-web.xml

```
<?xml version="1.0" encoding="utf-8"?>
<appengine-web-app xmlns="http://appengine.google.com/ns/1.0">
  <application></application>
  <version>1</version>

  <!-- Configure java.util.logging -->
  <system-properties>
    <property name="java.util.logging.config.file" value="WEB-INF/logging.properties"/>
  </system-properties>
</appengine-web-app>
```

Copy

4. Run it local

Right click on the project and run as “**Web Application**“.

Eclipse console :

//...

INFO: The server is running at http://localhost:8888/

30 Mac 2012 11:13:01 PM com.google.appengine.tools.development.DevAppServerImpl start

INFO: The admin console is running at http://localhost:8888/_ah/admin

Copy

Access URL <http://localhost:8888/>, see output

and also the hello world servlet – <http://localhost:8888/helloworld>

5. Deploy to Google App Engine

Register an account on <https://appengine.google.com/>, and create an application ID for your web application.

In this demonstration, I created an application ID, named “mkyong123”, and put it in `appengine-web.xml`.

File : `appengine-web.xml`

```
<?xml version="1.0" encoding="utf-8"?>
<appengine-web-app xmlns="http://appengine.google.com/ns/1.0">
  <application>mkyong123</application>
  <version>1</version>

  <!-- Configure java.util.logging -->
  <system-properties>
    <property name="java.util.logging.config.file" value="WEB-INF/logging.properties"/>
  </system-properties>

</appengine-web-app>
```

Copy

To deploy, see following steps:

Figure 1.1 – Click on GAE deploy button on the toolbar.

Figure 1.2 – Sign in with your Google account and click on the Deploy button.

Figure 1.3 – If everything is fine, the hello world web application will be deployed to this URL – <http://mkyong123.appspot.com/>

Result:

Thus the simple application was created successfully.
